

THERE'S SO MUCH MORE BEHIND A DOOR

Rolling Garage Doors

Initially invented by B&D back in the 50s, Rolling garage doors are commonly considered as amongst the most economical and functional garage doors available in Australia. Being constructed from corrugated steel they also provide strength against impacts.

Rolling doors can also be easily automated. The installation process is simple and little space is required as most openers fit nicely alongside the steel drum.

FEATURES & BENEFITS

- Suitable for many residential applications
- Open and roll upwards
- Vehicles can be parked right up to the front of the garage door
- Easily operated
- Steel drum sits on top of the garage opening, so they require minimal ceiling space
- Ideal for garages with overhead obstructions such as lighting or piping
